

Appendix 3

Difference of Means Test Results

This appendix presents the p-values for differences between means and proportions for each size class in each question used in this analysis. Results begin on the following page. The p-value for the difference between each of the 10 different pairs of the 5 unique size classes is presented as an upper-triangular matrix for each of the Ji-Paraná, Machadinho, and Cacoal sites, as well as for the mean across all sites.

Differences significant at 90% confidence are marked in **boldface** and enclosed in gray. A value of 'NaN' indicates a lack of any qualifying data points for analysis.

Description

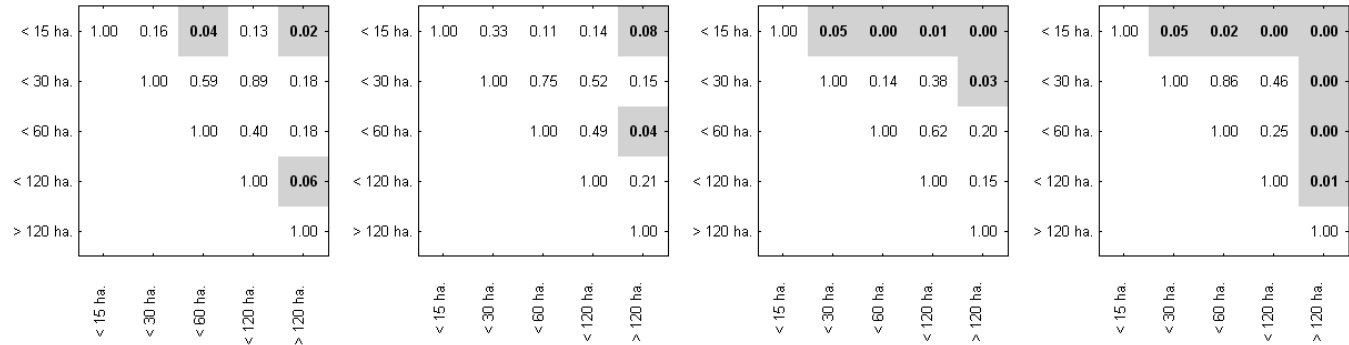

Ji-Paraná

Machadinho

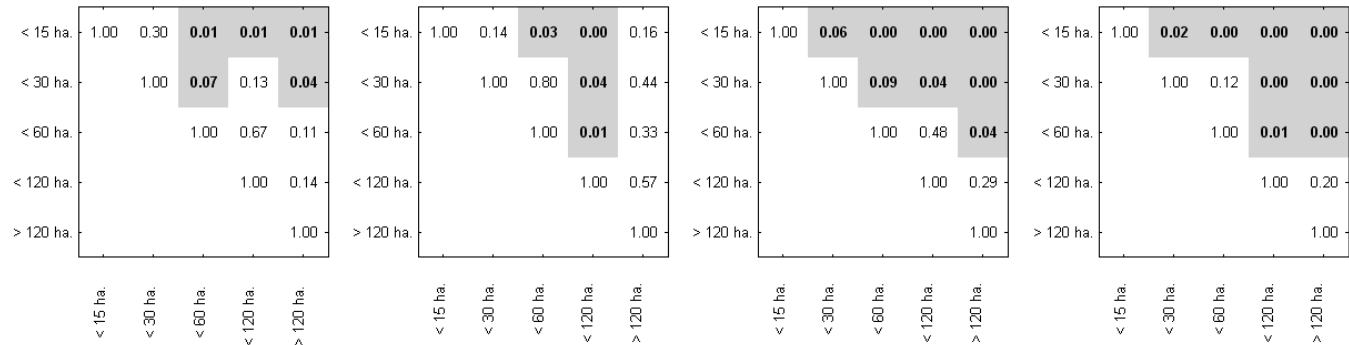

Cacoal

Average across All Sites

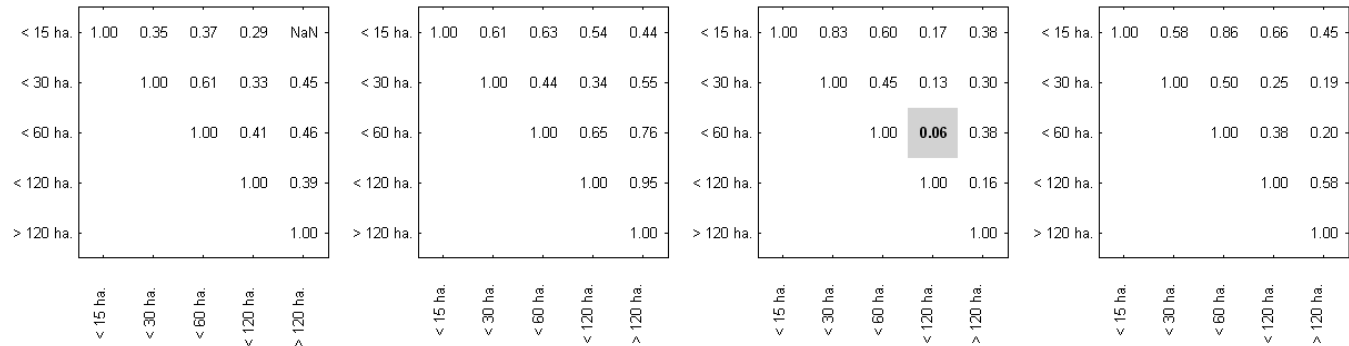

Proportion of Property in Pasture

Proportion of Property in Crops

Proportion of Property in Regrowth

Description

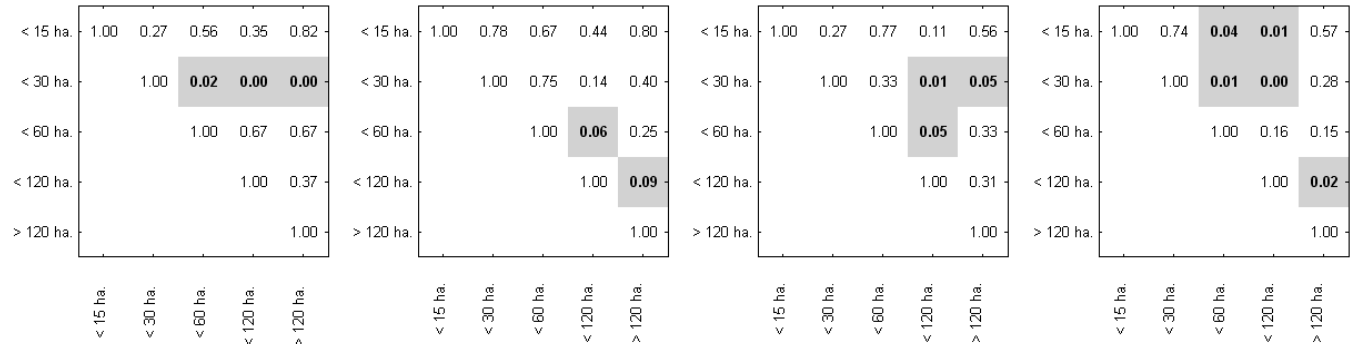

Ji-Paraná

Machadinho

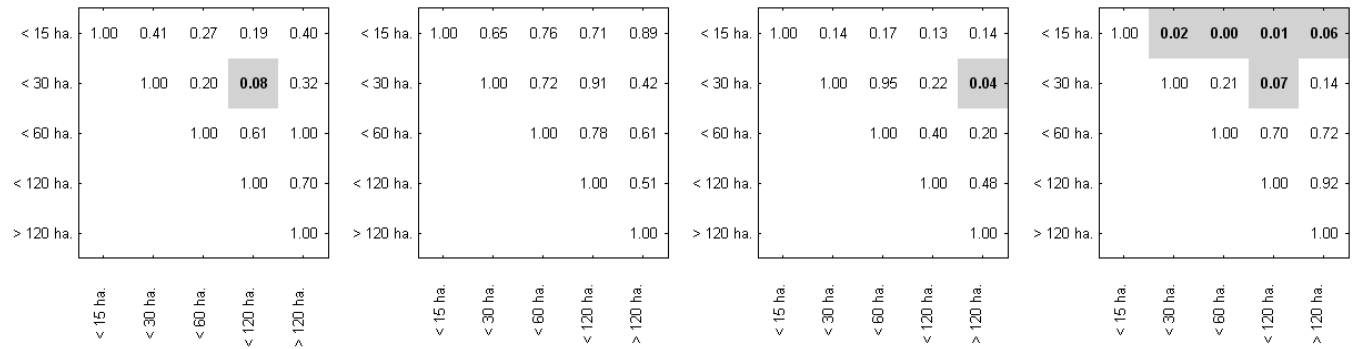

Cacoal

Average across All Sites

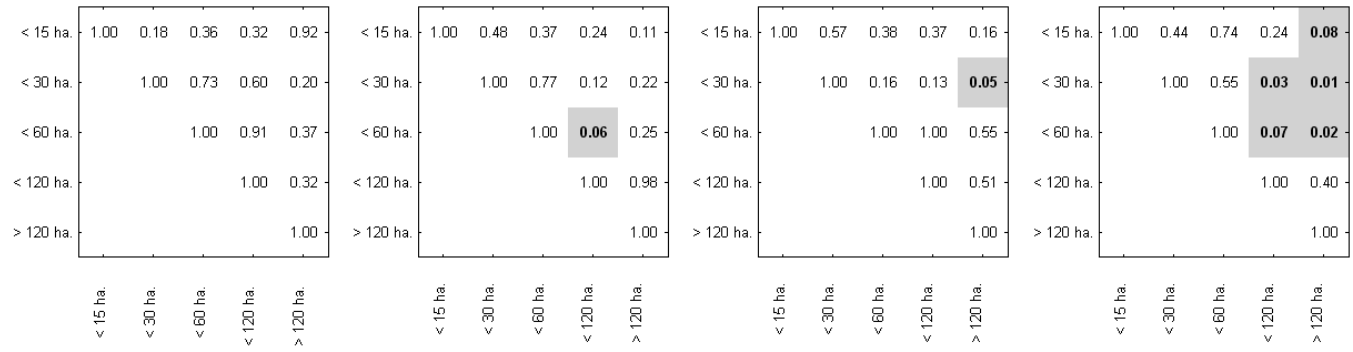

Proportion of Property in Forest

Raw VOP Per Hectare

Income Entropy

Description

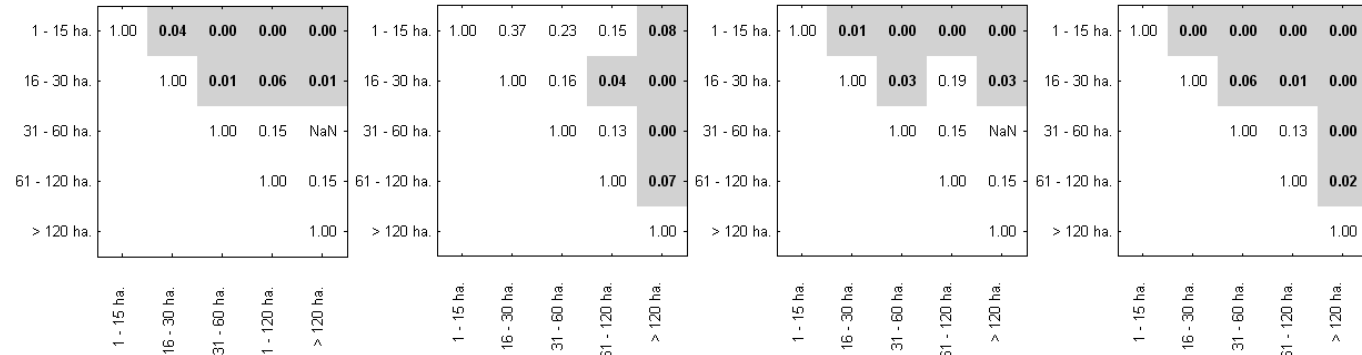

Ji-Paraná

Machadinho

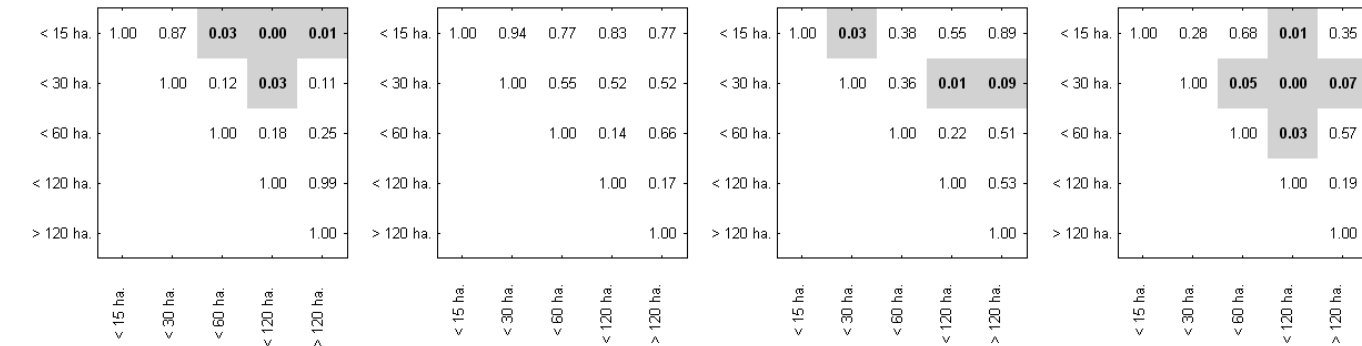

Cacoal

Average across All Sites

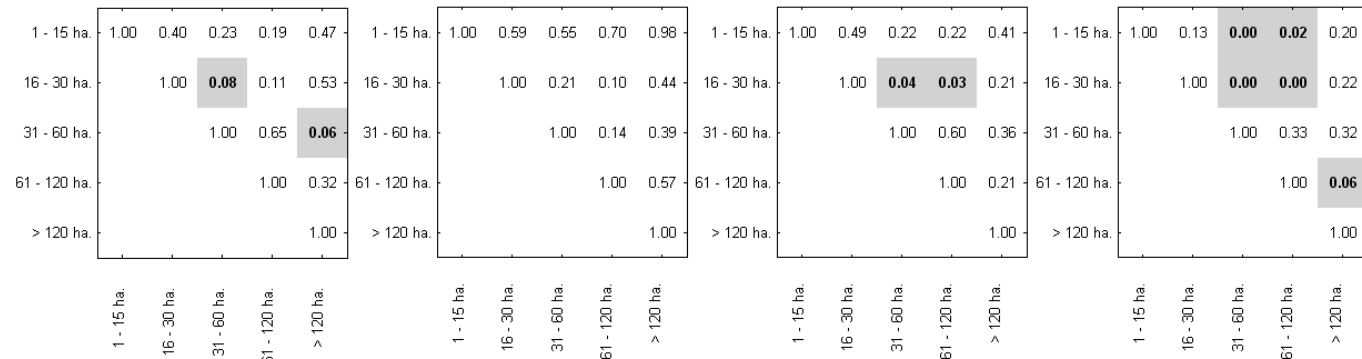

Proportion of Properties Raising Cattle

Cattle Density

Average Cost of Inputs per Hectare

Description

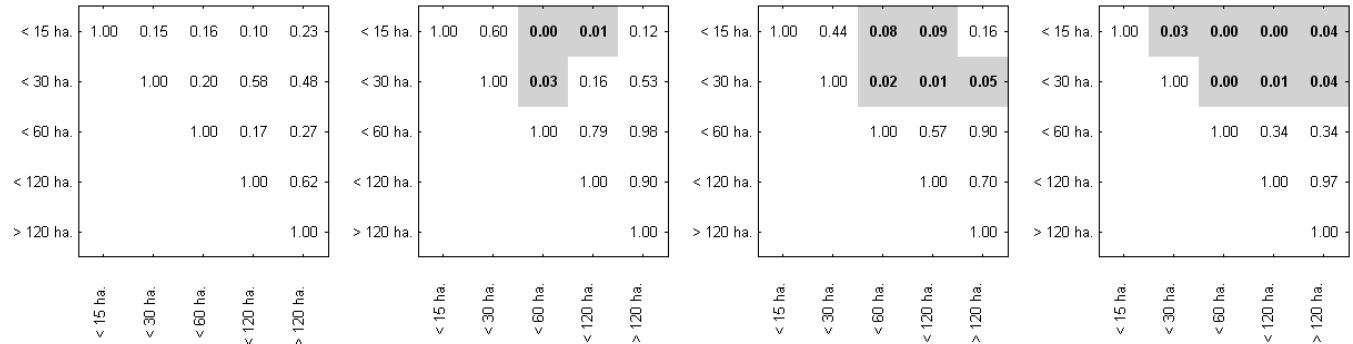

Ji-Paraná

Machadinho

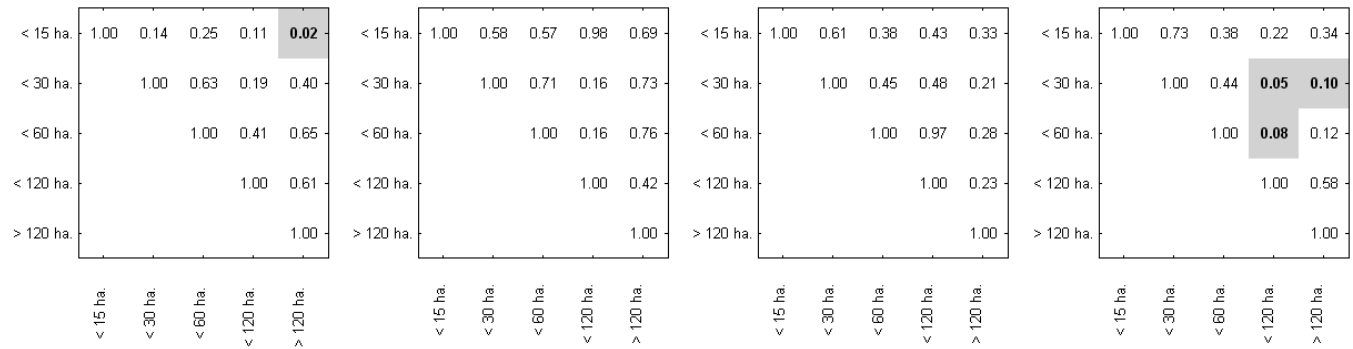

Cacoal

Average across All Sites

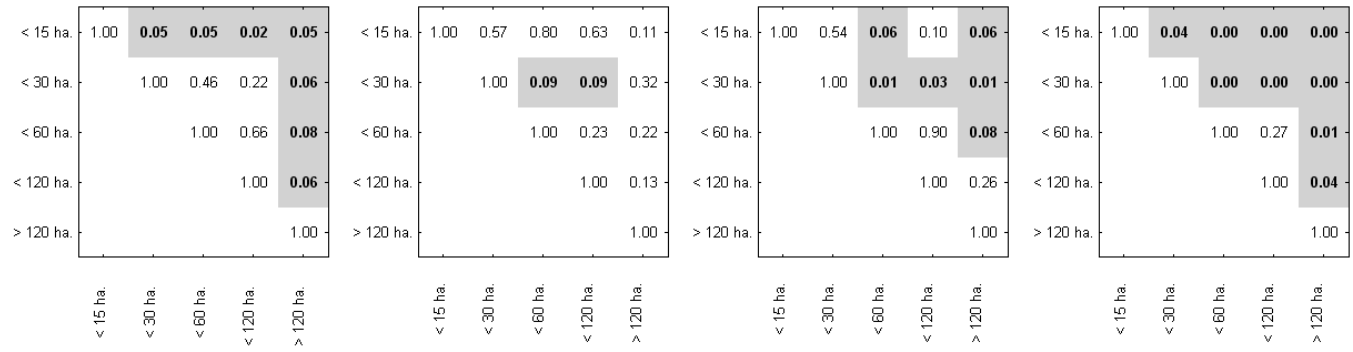

Maintenance Costs per Hectare

Person-days of Contracted Labor per Hectare per Year

Person-days of Family Labor per Hectare per Year

Description

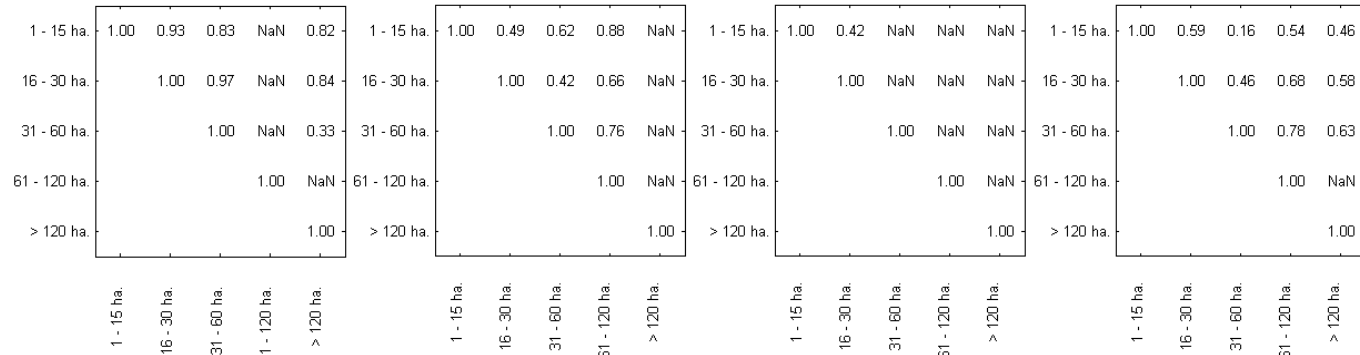

Ji-Paraná

Machadinho

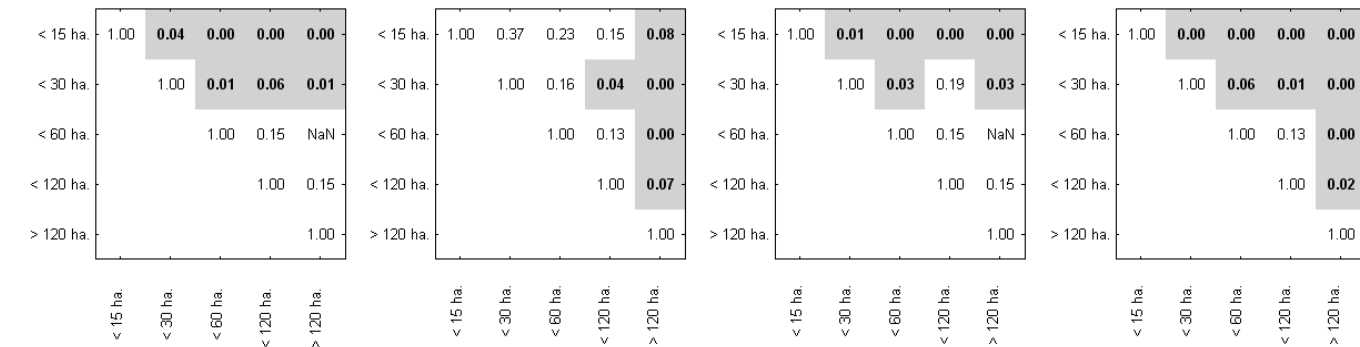

Cacoal

Average across All Sites

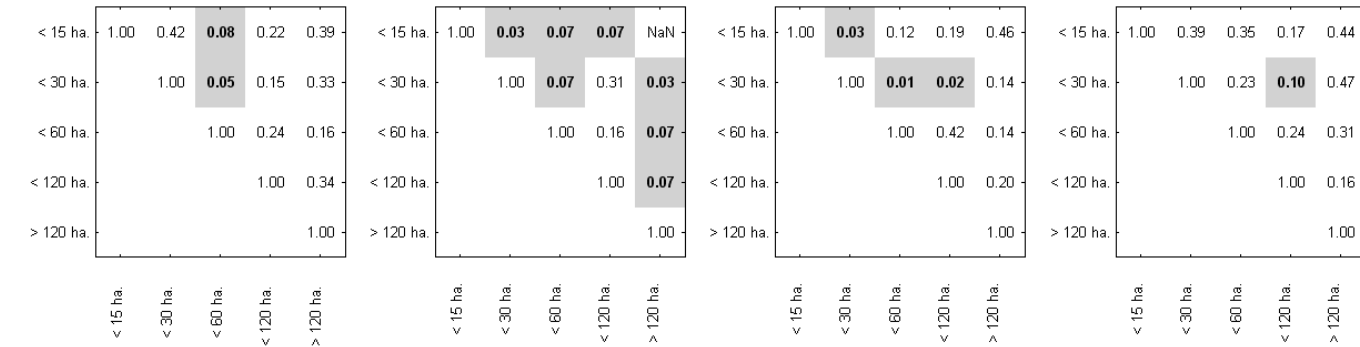

Average number of paid days worked on other farms

Proportion of Properties Raising Cattle

Proportion of Properties Having Sold Property

Description

Ji-Paraná

Machadinho

Cacoal

Average across All Sites

Proportion of Properties Having Bought Property
